DESIGNING HEALTHCARE SPACES WITH EMPATHY

The Covid-19 pandemic has led us to reassess care pathways into and out of hospital for ensuring both patient safety and continuity of care.

It has also provided an opportunity to put the Patient experience at the heart of our healthcare strategies.

Patients no longer come to the healthcare system as mere supplicants. Now well informed, patients expect to be involved in the decision-making about their pathology and their patient journey. They also expect to be in control when it comes to their stay in hospital.

Finally, with the patient experience and personnel engagement being linked, it is also time to make the hospital a great place to work..

Although primarily aimed at helping and inspiring you in your colour choices, this guide is based on the findings of our research study 'The Hospital of the Future: Challenges and Issues'. It addresses some of the questions raised in the study, such as:

How to promote mobility within the hospital?

How to reduce the distance nurses have to walk?

How to better engage the patient and their family?

The whole community has a role to play, whether it be architects, construction managers or manufacturers, in providing practical answers to these questions.

We hope this guide will highlight some helpful ideas.

Tarkett Human Conscious Design™

THE ROLE OF COLOUR IN HEALTHCARE ENVIRONMENTS

The coloured appearance of an environment is a stimulus, and a message that carries meaning, arouses sensations and provokes emotions. Colour influences our behaviour and our decisions. In the hospital environment, colour enables the recognition of key features, allowing people intuitively to interpret spaces and move between them. And because it shapes what we see, colour is important in signage.

by Marion Lamarque

Colour expert
Founder and President of COLOR THE LIFE.

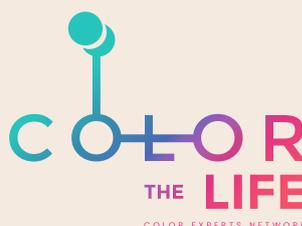

Marion Lamarque is a designer with expertise in 360° colour strategy (identity, trends, design, production, merchandising and communications). She founded COLOR THE LIFE, the network of colour experts that reveals and uses the potential of colour in all areas to sustainably develop the human, economic and environmental performance of organisations.

COLOR THE LIFE

In 2021, COLOR THE LIFE organised a cycle of webinars on the theme “Colour & Health”.

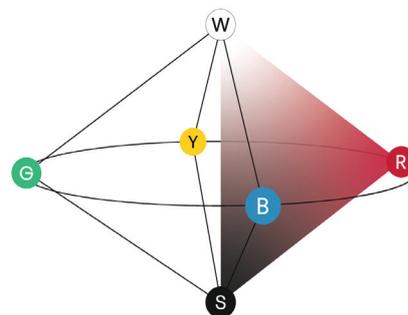

www.colorthelife.org

DEFINING A COLOUR USING THE NATURAL COLOUR SYSTEM ('NCS')

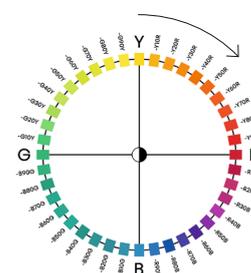

A pragmatic, tridimensional approach

NCS is a universal colour language based on science. It identifies a colour in 2 steps using 6 basic shades that the human eye perceives as pure: white (W), black (S), yellow (Y), red (R), blue (B) and green (G).

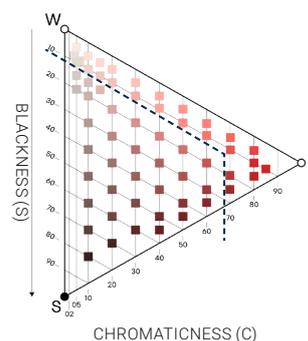

1. HUE

The hue is the relationship to 1 or 2 of the 4 chromatic elementary colours in the colour circle.

2. NUANCE

Nuance is defined by the quantity of black (S), white (W) and chromaticness (C) or purity of hue.

THE COMPLETE NCS COLOUR NOTATION

Example: Platinum 100 Candy Coral NCS S1070-Y90R

HUE: Y90R = mix of 10% of yellow, 90% of red

NUANCE: S1070 = 10% black
70% chromaticness

Nuance HUE

THE ROLE OF COLOUR IN HEALTHCARE ENVIRONMENTS

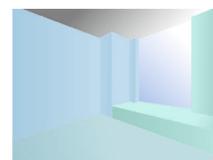

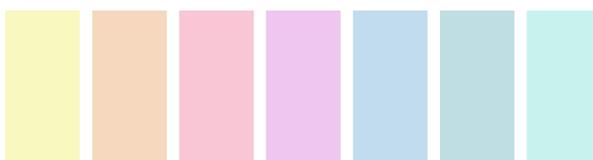

HOW TO HARNESS THE EMOTIONAL EFFECT OF COLOUR

The coloured harmony of a space enables patients, staff and visitors to be immersed in an atmosphere conducive to their well-being, whether they seek calm, attention and privacy, or stimulation and conviviality.

The choice and positioning of colours on walls, woodwork, floors, ceilings and furniture can focus the user's gaze on a specific point or conversely open up the space and divert attention.

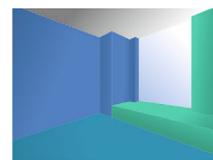

PASTEL

Pastel colours enlarge and open up the space.

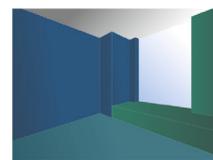

BRIGHT

Vivid colours create a cheerful, uplifting atmosphere and are indicative.

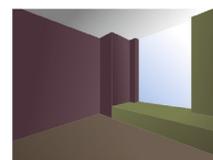

INTENSE

Intense colours dramatise the space and promote intimacy.

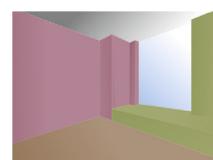

DARK

Dark colours highlight architectural elements.

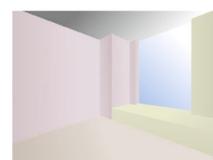

NATURAL

Natural colours create authentic and cosy atmospheres.

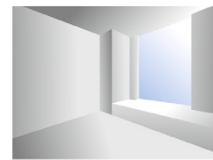

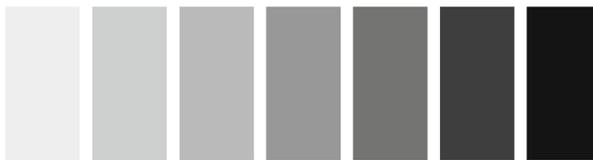

MUTED

Muted colours are discreet and provide reassurance.

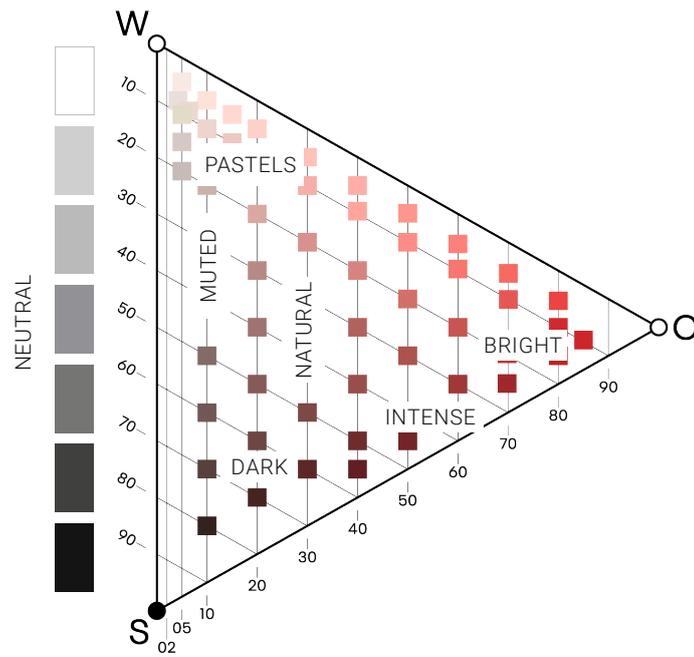

NEUTRAL

Blacks and whites create striking settings. Greys bring depth and texture.

DEFINING THE COLOUR FAMILIES

A colour family is a set of colours with the same Nuance (Tone).

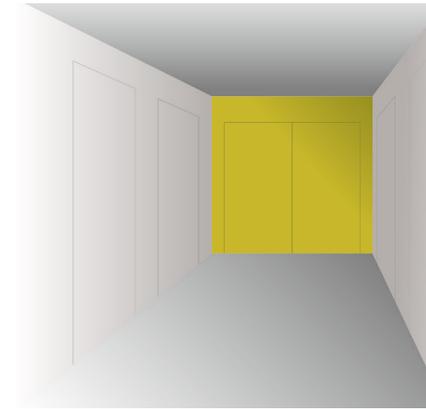

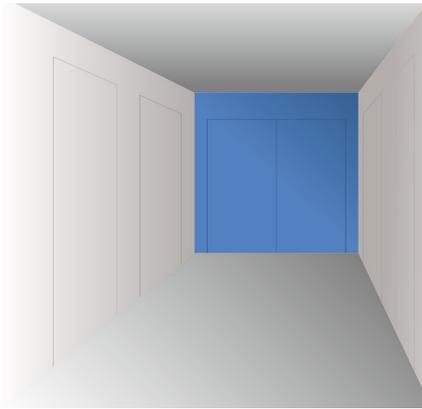

Children's Memorial Health Institute, Warsaw, Poland

THE ROLE OF COLOUR IN HEALTHCARE ENVIRONMENTS

HOW TO INFLUENCE SPATIAL PERCEPTION

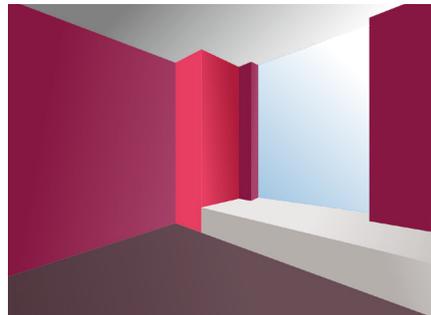

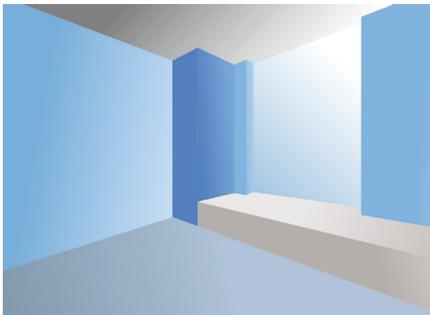

Cold colours

Warm colours

DISTANCE AND DEPTH PERCEPTION

A warm colour (yellow, orange, red, pink) seems closer than a cold one (purple, blue, turquoise, green). It can be used to make corridors seem shorter or longer, for example.

SPACE SIZE PERCEPTION

Light, cool colours evoke air and water, two elements that people associate with light and peace. In architecture, they enlarge and open up areas. Dark, warm colours envelop us and reduce the feeling of space, creating a sense of intimacy.

Children's Memorial Health Institute, Warsaw, Poland

HOW TO ENHANCE VISUAL PERCEPTION

With the elderly becoming increasingly numerous in hospitals, it is vital to consider the experience of people with visual impairment when designing a healthcare facility. Colour contrast is central to providing visual clues for doors, handles, handrails and signage, enabling people with diminished sight to better make sense of their surroundings.

HUE CONTRAST

CHROMATIC CONTRAST

LIGHT/DARK CONTRAST

LRV difference > 30

As the Light Reflection Value of a colour is linked to its blackness, this measure can help create the right level of contrast. An LRV difference of 30 points is required to generate sufficient contrast.

DESIGN TRENDS IN HEALTHCARE

BIOPHILIC DESIGN

CONNECTING HUMANS AND NATURE

The positive impact of interaction with nature in healthcare facilities has been widely demonstrated.

Since the first research conducted by Dr Roger Ulrich 30 years ago, a growing number of studies suggests that visual exposure to nature not only reduces patients' stress, but also pain.

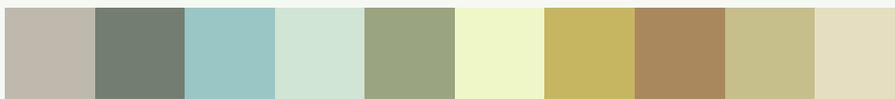

FEATURES

- ✓ Large openings to nature
- ✓ Access to natural light
- ✓ Visual representations related to nature
- ✓ Presence of plants
- ✓ Materials with natural effects (wood, fibres, minerals,...)

COLOUR FAMILIES

- Natural
- Neutral
- Muted

HOMELY DESIGN

HUMANISING HOSPITALS

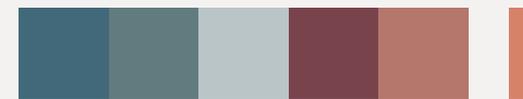

Warm and welcoming spaces reflect a human-centred approach that respects the privacy and dignity of each individual.

Soothing and intimate spaces will be created using familiar materials and patterns, 'just like home'. This will be particularly powerful for the elderly.

FEATURES

- ✓ Familiar, non-institutional feel
- ✓ Spaces on a human scale
- ✓ Spaces with a focus on privacy

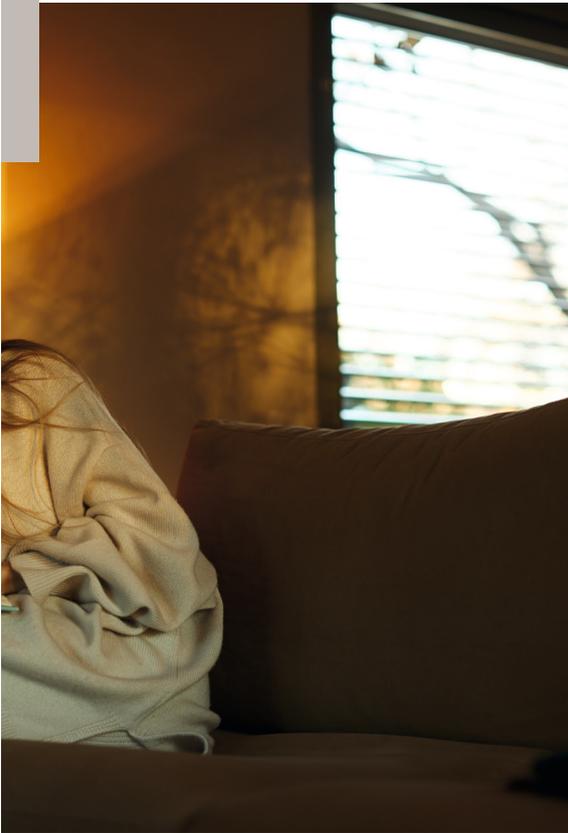

NCS 5020 B NCS 5010 B30G NCS S 2005-B20G NCS S 6010 R10B NCS 4020-Y80R NCS

GRAPHIC DESIGN

CREATING INTUITIVE SPACES

Colour and surfaces are used to communicate, orientate, guide and distract patients and their relatives.

Spaces become intuitive, playful and easy to live in. This type of atmosphere is particularly suitable for paediatric wards.

FOCUS ON PEDIATRICS

Frédérique F. Thomas created the decor of the outpatient facility at the Necker Children's Hospital in Paris. Below, the interior designer, visual artist and colourist shares her thoughts.

USING COLOUR TO CREATE SUPPORTIVE SPACES FOR CHILDREN, FAMILIES AND HEALTHCARE PROFESSIONALS

Studies show that saturated and bright colours appeal to children and adolescents. They also help to reassure relatives accompanying the children, creating positive, attractive spaces that relieve some of the anxiety associated with hospitals. The idea behind this design was to make the floor seem like a game that involves surfing from one colour to another. Large diagonal blocks of colour connect children's rooms with corridors and other areas. As the doors are often left open, young patients feel less isolated during treatment and closer to their families and the healthcare team.

Colour stimulates our sense, just like music or perfume. I chose three shades: magenta, petrol and saffron yellow (Bright Violet, Intense Petrol and Intense Olive) to create a colourful harmony, generating a genuine yet pleasing contrast. **I created three ambiances to give the children a choice. It is important that they take ownership of their space when they come in for treatment. That is the least we can give them.**

What are your thoughts on how design and colour impact the well-being and healing of patients ?

Offering patients a welcoming, reassuring environment where colour and design work in customised harmony seems to me an integral part of a seamless treatment experience. For the Necker Children's Hospital, it was important to bring joy and life to a place where children feel vulnerable, especially when facing difficult outcomes. So I made sure that the bright, contrasting colours really catch the eye. The decor also gives parents confidence, knowing the space was designed specifically for children.

What inspires you when designing interiors for healthcare facilities?

As well as the building's architecture and the technical challenges often encountered, I draw inspiration from

the colours, graphics, materials, textures and finishes available. They play such an important role in the design of my projects.

How important is it to understand the expectations of the people who use the ward ?

The experience of the healthcare teams is invaluable. You have to listen to the different views and gather as much information as possible. Then suggesting design options to them is interesting, especially when the ideas are new to them and shake things up.

And I have received good feedback— the ward works well and the teams are very happy.

HERE IS YOUR FLOORING REQUIREMENTS CHECK LIST:

- ✓ Smooth, non-porous surface with minimal joints to prevent dirt build-up
- ✓ Perfect coving and hot-welded, durable joints for watertight installations
- ✓ Resistance to repeated disinfectant use (quaternary ammonium, alcohol, bleach, hydrogen peroxide etc.)
- ✓ Easy-to-repair material. If damaged, fix on the spot and reseal without replacing the whole floor.

SOME REFERENCES IN HEALTHCARE

BIOPHILIC DESIGN

CONNECTING HUMANS AND NATURE

Large openings on to outdoor greenery and access to natural light are recognised to reduce stress among patients and staff. And so do nature-themed visuals (natural materials or imitations, images of nature landscapes, neutral and natural colours).

Both the Bursa Hospital in Turkey and Belgium's AZ Zeno Hospital have implemented this principle to support patient and staff well-being.

Bursa Hospital, Bursa, Turkey - iQ Eminent
https://professionals.tarkett.com/en_EU/node/bursa-hospital-8592

HOMELY DESIGN

HUMANISING HOSPITALS

Familiar and non-institutional atmospheres help create soothing, intimate spaces that protect individual privacy and dignity, contributing to a positive patient journey.

Rouen University Hospital in France kept this guidance top of mind when designing 'cocoons' for its infusion centre. The materials and colours convey a sense of peace and intimacy.

GRAPHIC DESIGN

CREATING INTUITIVE SPACES

The imaginative use of graphics and colour can create effective wayfinding solutions and provide positive distraction.

Customised design with Tarkett's Floorcraft service can make the decor even more distinctive.

Below is a unique interior project with custom designs inspired by Tove Jansson's Moomin books. Tarkett supplied 33,000 square metres of floor and wall coverings along with 118 Moomin-themed Floorcraft designs.

Human-Conscious Design™

Tarkett Human-Conscious Design™ is our pledge to stand with present and future generations.

To create flooring and sports surfaces that are good for people and for the planet. And to do it every day.

We deliver on this through the synergy of three commitments:

1. Deep human understanding
2. Conscious choices. For people and planet
3. With you. Every step of the way
